Create a positive and negative test case to functionally test a feedback form.
The form has required fields "Name", "Email", "Message" and a button "Send".
After pressing the button, a message about the result of the operation is displayed.

Positive Test case

ID	Priority	Module	Summary	Preconditions	Test data	Steps	Expected Result
1	High	Feedback form	Message is displayed indicating the result of the operation	1. Site is open something.com 2. Feedback form is open 3. Consent to the processing of personal data confirmed	Name - Test Email - Test@gmail.com Message - This is test message	1. Enter name from test data 2. Enter Email from test data 3. Enter Message from test data 4. Click the "Send" button	Message "Your message has been sent" is displayed

Negative Test case

ID	Priority	Module	Summary	Preconditions	Test data	Steps	Expected Result
1	High	Feedback form	Refuse to send message if "Email" value is invalid	1. Site is open something.com 2. Feedback form is open 3. Consent to the processing of personal data confirmed	Name - Test Email - Test@ Message - This is test message	1. Enter name from test data 2. Enter Email from test data 3. Enter Message from test data 4. Push the "Send" button	Feedback form not sent
